Professional Summary

Third-year Electronics and Communication Engineering student and Embedded Engineer with hands-on proficiency across hardware design, bare-metal firmware, and software engineering. Experienced in building from silicon to software – from register-level RISC-V assembly and custom PCB/sensor bring-up to full-stack IoT telemetry pipelines, cloud integration, and algorithmic problem solving. Seeking an Embedded Engineer role to architect high-performance, connected hardware and software systems.

Education

B.E. Electronics and Communication Engineering

Rajalakshmi Institute of Technology, Chennai

Currently in 3rd year

2024 – 2028 (Expected)

CGPA: 8.65/10

Technical Skills

- **Hardware & Embedded Systems:** ESP32, ESP32-C6, ESP32-CAM, Raspberry Pi 5, Arduino UNO R3, Altera DE2 FPGA, Bare-Metal MMIO, CST Studio, Keysight ADS
- **PCB Design & EDA Tools:** PCB/PCD Design, KiCad, Proteus, EasyEDA, Schematic Capture, Multi-Layer PCB Layout, Routing, DRC/ERC, Gerber & BOM Generation, Component Footprints, SMD/THT Soldering, Hardware Bring-up
- **Hardware Protocols & Interfacing:** I2C, SPI, UART, MQTT, LoRaWAN, GPIO, PWM, ADC, MMIO, WebSockets, HTTP/REST
- **Programming Languages:** C, C++, Python, JavaScript (ES6+), TypeScript, Java, SQL, RISC-V Assembly
- **Software & Web Development:** React.js, Next.js, Node.js, Express.js, FastAPI, Flask, HTML5, CSS3, Tailwind CSS, REST APIs
- **Cloud & Databases:** Firebase, HiveMQ, ThingSpeak, AWS IoT Core, Google Cloud Platform, MongoDB, PostgreSQL, MySQL, SQLite
- **Engineering Tools & DevOps:** Git, GitHub Actions, Docker, Linux/Bash, ESP-IDF (v6), VS Code, PlatformIO, MATLAB, Scilab, ADB
- **Core CS & Problem Solving:** Data Structures & Algorithms (LeetCode streak), OOP, Concurrency, RTOS Architecture

Featured Projects

Bare-Metal RISC-V Trap Handler & Context Switcher

ESP32-C6

Tech Stack: RISC-V Assembly, C, Direct MMIO, Hardware Timers, Interrupt Controller

- Designed and implemented a bare-metal trap handler and timer-based preemptive context switcher in assembly with no RTOS or vendor libraries
- Configured memory-mapped I/O (MMIO) registers for hardware interrupt handling, stack frame preservation, and register-level task scheduling

Digital Twin for Industrial Monitoring

5G-Integrated IoT System

Tech Stack: ESP32 / Edge Node, Multi-Sensor Fusion, 5G Telemetry, Python, Real-Time Web Dashboard

- Architected an industrial digital twin connecting multi-sensor edge nodes with 5G connectivity for real-time equipment telemetry and predictive maintenance
- Developed cloud data ingestion pipelines and responsive dashboard visualization, bridging sensor-level data acquisition to software analytics

Dual-Axis Solar Tracker

Embedded Control System

Tech Stack: Custom PCB Prototyping, Microcontroller, Servo Motors, LDR Sensor Array, Closed-Loop Control, C/C++

- Constructed a dual-axis solar tracker optimizing photovoltaic panel orientation using an analog LDR sensor bridge and closed-loop feedback
- Designed custom sensor interfacing and motor driver circuitry with voltage regulation; programmed precision tracking algorithms in C/C++

Conformal Helmet-Integrated Antenna Array

RF & Antenna Hardware

Tech Stack: Microstrip Patch Array, Dual-Band UHF/L-Band, Flexible PCB Substrate, CST Microwave Studio, ADS, RF Shielding

- Engineered a flexible microstrip patch antenna array conformal to curved helmet geometry, replacing bulky whip antennas for tactical gear

- Modeled dual-band UHF/L-band radiation patterns in CST/ADS and integrated an RF shielding layer with ruggedized coax interfacing

Technical Experience

- Conceptualized, engineered, and deployed embedded and IoT solutions end-to-end, from custom PCB design (schematic to fabrication) and board bring-up to bare-metal firmware and full-stack dashboards
- Executive Technical Organizer at IETE Students' Forum (ISF), coordinating technical hackathons and workshops across software and hardware tracks
